The Relational Geographies of Policing and Security

It is estimated that in a typical weekend 25,000 people visit Union Street, Plymouth's night club strip. These thousands are policed by just sixteen police officers each night. While these numbers seem small, the police are just one part of 'Operation Expound', a multi-agency operation to maintain public order and safety in Plymouth's night time economy (NTE). As well as the state police, door-staff, military police, special constables, publicans, Closed Circuit Television (CCTV) operators, Street Pastors, paramedics, local businesses and licensing agencies are all enrolled into a policing network that helps to shape the space of the night time economy.

This approach is not unique to the NTE and many places are being shaped by a range of public, private and voluntary agencies that have responsibility for the policing of daily life. While existing work has studied the composition, effectiveness and appropriateness of these alliances (Yarwood 2007, Cook 2010), we argue that greater attention is needed on the *spatial practices* of the agencies enrolled into these partnerships. These not only reflect how space is viewed and regulated, but also help to shape different places and the social relations in them.

To begin doing this, we consider the spatial practices of security and policing. Although the terms are often used interchangeably, we argue that there are subtle but significant differences between the two (Table 1). *Policing* is most commonly associated with the 'maintenance of order, the control of disorder, the prevention of crime and the detection of offenders' (Rawlings 2008, p. 47) whereas *security* is concerned with protection of people, places or objects from threats (Graham and Gregory 2009, Zedner 2009). There are also important spatial differences between the two ideas: while security is concerned with territory, policing relates to place.

Table 1 summarises these apparent differences and is used as a jumping off point for this paper.

	Policing	Security
Social Impact	Shaping attitudes and values	Conserving values and attitudes
Practices	Varies from proactive to reactive	Exclusion
Types of space	Public	Private and mass-public
Spatiality	Places	Territories
Accountability	Citizen	Customer

Table 1: Differences between policing and security practices

We should point out at this stage that we do not associate particular agencies exclusively with one or other of these practices. The state police, for example, have important security functions and, increasingly, private and voluntary agencies also deliver forms of policing. Instead, we recognise security and policing as practices that are deployed by different agencies in relation to each other and the spaces they attempt to control. The following sections of the paper discuss these practices in turn and how they shape and define space. In the final section, we return to the example of the night-time economy and suggest how practices of security and policing can be understood as a relational policing network.

Security, Territory, Exclusion

Security, as Lucia Zedner (2009, p.9) notes, is a 'promiscuous concept' that has been widely but inconsistently deployed across a range of spaces and contexts. At a state or global level, discourses of 'national security' have influenced the development of external foreign policy, internal homeland security, urban architecture and the defence of sites against perceived global threats (Adey 2009, Anderson and Adey 2012, Martin 2010, Philo 2012). Our focus in this paper, though,

1
2
3 is at the domestic level where ideas of security have been used to counter crimes
4
5 such as theft or assault (Berg 2010, Wakefield 2008).
6
7

8
9 Security has often been taken to mean 'freedom from imagined or real danger
10 in present or future' (Graham and Gregory 2009, p.672) but this is impossible to
11 achieve for 'absolute security implies a condition of being without threat, which, even
12 if it could be achieved today, always remains liable to negation by new threats
13 tomorrow' (Zedner 2009). A key assumption, therefore, of many security practices is
14 that anyone or anything is a potential threat. Thus, everyone exiting a shop is
15 required to pass through electronic barriers as they may have stolen goods
16 concealed on their bodies; all employees are required to carry identity cards to prove
17 their legitimacy; all entrants to a night club are searched for weapons; all passengers
18 at airports are subject to bodily surveillance; and all emails are scanned as they can
19 carry viruses.

21
22
23
24
25
26
27
28
29
30
31
32
33

34 These forms of security focus on 'preventing the worse' (Johnston 2001)
35 through the creation of literal and metaphorical barriers to keep out people, ideas
36 and things that are seen to threaten the security of a space (Young 1999, Herbert &
37 Brown 2006, Loader 2006, Zedner 2009). Young (1999) argues that these practices
38 have led to an 'exclusive society' that aims to 'hold at bay and exclude' those
39 regarded as threatening security, be it someone who will not consume in a shopping
40 centre or a person who appears to disrupt the ideal of suburbia. Security practices
41 construct particular social groups as being more likely than others to threaten
42 particular spaces (Raco 2003). While some may be allowed through barriers others
43 will be 'banished' from the spaces they protect (Herbert and Beckett 2010, Wakefield
44 2008). These spatial practices are most clearly seen in the regulation of highly
45

1
2
3 secure private and semi-public spaces such as gated communities or shopping malls
4
5 where access is conditional on behaving in ways that are compliant with and support
6
7 the owners' purposes (Atkinson 2003, Shearing & Wood 2003).
8
9

10
11 Yet, increasingly, these principles are also being applied to public space. In
12
13 Cape Town, for example, City Improvement Districts (CIDs) require businesses to
14
15 pay a levy that, in turn, is used to fund private security patrols in public space
16
17 (Paasche et al. 2013). These are mainly concerned with excluding so-called
18
19 'undesirables', such as the homeless, sex-workers, and urban poor, from defined
20
21 territories that are given over to consumption. Equally, many state police forces have
22
23 also adopted zero-tolerance policies that implement Wilson and Kelling's (1982)
24
25 'broken windows' thesis that supposes physical disorder contributes crime (Fyfe
26
27 2010, Fyfe *et al* 2006, Herbert & Brown 2006). Zero-tolerance practices are a form of
28
29 security that target what or who is deemed to cause fear, including 'aggressive
30
31 panhandling, squeegee cleaners, street prostitution, boombox cars, public
32
33 drunkenness, reckless bicyclists, and graffiti' (Giuliani and Bratton 1994, p.5) as well
34
35 as addicts, rowdy teenagers, prostitutes, loiterers, the mentally disturbed and
36
37 strangers, all of whom that Wilson and Kelling (1982) summarise as 'undesirable'.
38
39
40
41
42

43
44 Security operates in private and public space and is practised by public and
45
46 state agencies. In all cases, however, security relies on defining and protecting a
47
48 particular *territory*. Security practices do not seek to use places to *modify* behaviour
49
50 but, rather, to use space in a territorial way to *exclude* behaviour that is threatening
51
52 to its hegemonic, imagined values. The definition, communication and enforcement
53
54 of particular bounded spaces are the ways in which security is spatially empowered
55
56
57
58
59
60

1
2
3 (Sack 1983). Security thus appears to hold a symbiotic relationship with territory: it
4
5 helps to define a territory that, in turn, defines the extent of its power.
6
7

8
9 Indeed, the purpose of securing a particular territory is to produce space that
10 is different from those around it. As Zedner (2009, p.61) observes a complex
11 geography of security is emerging that encompasses different “patchworks’, ‘quilts’,
12 ‘bubbles’, ‘corridors’, ‘mosaics’, ‘webs’, ‘networks’ and ‘nodes” of secure spaces that
13 extend across different urban spaces in different ways. In a study of Maputo,
14 Mozambique, Paasche and Sidaway (2010) reveal how urban space is divided into a
15 patchwork of public, private and ‘ad hoc’ actors that have reduced the city to a series
16 of micro-security-enclaves that reflect and enforce existing inequalities in
17 development and power. Shearing and Wood (2003, p.406) argue that a form of
18 nodal governance has emerging that is controlled by private actors in specific
19 spaces: ‘people now live within a world full of crisscrossing group memberships that
20 simultaneously operate across and through multiple governmental domains’.
21 Security contributes to a form of stratified mobility that grants access to urban
22 spaces for some but, at the same time, denies it to others.

33
34
35
36
37
38
39

40 These forms of security, which rely dominantly on exclusion or banishment,
41 have what Herbert and Beckett (2010, p.240) describe as a ‘paper-thin’
42 understanding of place. They fail to appreciate the processes that lead to people
43 becoming vulnerable and show little concern at where they move to when they are
44 banished. Pushing people out of one place into another does not provide a solution
45 to deep-seated social problems that extend beyond the territories in question. While
46 some neighbours and premises benefit from additional private and voluntary policing,
47 others become places where threats are banished to, exacerbating social difference
48
49
50
51
52
53
54
55
56
57
58
59
60

1
2
3 (Herbert 2010). Such understandings of place fail to appreciate the nature of
4
5 complex social relations that are found within particular places and contribute to
6
7 social exclusion (Cresswell 1996, Herbert 2008, Mitchell 2005).
8
9

10
11 Treating neighbourhoods or city centres as territories to be cleansed and
12
13 secured is short-sighted, ineffective and socially divisive. In short, a greater
14
15 understanding of place is needed to provide a more appropriate response to these
16
17 issues. Arguably the concept of policing is, or at least should be, centred on place as
18
19 opposed to territory. The following section re-focuses attention on policing and, in
20
21 particular, how different conceptualisations of place are important to this.
22
23

24 25 *Policing and Place* 26

27
28 Policing is a far broader concept than security and encompasses a wider
29
30 range of practices (Yarwood 2007) that include:
31
32

33
34 organised forms of order maintenance, peacekeeping, rule of law enforcement, crime
35
36 investigation and prevention and other forms of investigation and associated information-
37
38 brokering - which may involve a conscious exercise of coercive power - undertaken by
39
40 individuals or organisations, where such activities are viewed by them and/or others as a
41
42 central or key defining part of their purpose (Jones and Newburn, 2002, p.19)
43

44
45 Practices and discourses of policing vary widely within and between places,
46
47 reflecting different systems and efforts to maintain the interests of state, capital and
48
49 class. Thus, policing can range from violent suppression through to forms of
50
51 community actions that attempt to empower people to police their own localities
52
53 (Bowling & Foster 2002, Paasche 2013a). Despite this variety, the practice of
54
55 policing differs from security in three ways.
56
57
58
59
60

1
2
3 First, policing concerned with the aftermath of a crime, rather than simply
4 preventing it from happening. Thus, judicial-policing regimes will take action against
5 those who have offended and, in principal at least, take measures, including
6 imprisonment, with the aim encouraging offenders to conduct their own conduct in
7 ways that are acceptable to wider society (Foucault 1977).
8
9
10
11
12
13

14
15 Second, policing uses place to achieve acceptable forms of conduct. Place-
16 based policing relies on a range of agencies working together to resolve issues
17 inside a particular locality (Cook 2010, Henry & Smith 2007, Mackenzie & Henry
18 2009); it is proactive in nature, attempting to prevent crimes before they occur. Thus,
19 policing agencies may liaise with schools or youth groups to provide activities for
20 young people that, in turn, aim to prevent anti-social behaviour (Brown 2013). In
21 principle at least, these forms of partnership are, or should be, accountable to all
22 sections of the population and, in some cases minority groups, such as gay people,
23 have been able to gain a foothold in the way that their localities and needs are
24 policed (McGhee 2003).
25
26
27
28
29
30
31
32
33
34
35
36
37

38 In these instances, policing aims to work *within* a space to control and modify
39 behaviour inside it. In contrast, security practices control space by excluding threats
40 from it. Policing is an attempt to produce social control through 'the creation of
41 systems or surveillance coupled with the threat of sanctions' (Reiner 1994) or, after
42 Foucault (1977), a set of practices aimed at encouraging self-conduct that is deemed
43 acceptable to wider society. Thus, policing encompasses a wider range of practices
44 than simply aiming to exclude (DeVerteuil et al. (2009)). In a study of Skid Row, Los
45 Angeles Stuart demonstrates how the police, working with other agencies, have
46 attempted to reform rather than banish the homeless and concludes that 'policing
47
48
49
50
51
52
53
54
55
56
57
58
59
60

1
2
3 practices re-imagine homeless people as moral beings that, beyond their poor
4 choices, behaviours and lifestyles, are essentially 'like us' (2013, p.15).
5
6
7

8
9 This is not to suggest that place-based policing is a panacea for the ills of the
10 post-justice city. Far from it. The 'trapdoor of community', as Herbert (2005) puts it,
11 means that many people unable or unwilling to work in formal partnership fall past
12 the opportunities they offer. Communities that are unable or unwilling to govern
13 themselves are less likely to benefit from community policing. As Desforges et al
14 (2005, p.441) argue people 'are judged to have succeeded or failed as citizens of a
15 place-based community, with repercussions for the further treatment of that locality
16 by the state' or, put simply, community has come to be viewed as the cause and
17 solution of social ills (Herbert-Cheshire 2000). This can lead to a neglect of places
18 outside the boundaries of a community, so that the displacement of crime becomes
19 some other community's concern. Yet, for all its faults, these forms of policing
20 represent an attempt to work with different agencies, inside a place, to shape rather
21 than conserve attitudes and values.
22
23
24
25
26
27
28
29
30
31
32
33
34
35
36
37

38 Finally, then, while policing replicates dominant power relations and can be a
39 way of coercing the populace, it reflects, or should reflect, broader ideals of
40 citizenship. Garland (2001) argues that the responsibility for crime control must be
41 shared amongst the government, non-state actors and organisations. Thus, those
42 who are policed have rights and duties, including the right to involve themselves in
43 policing practices. State police forces, in democracies at least, are accountable to
44 their populace through various political-judicial measures. Indeed, Elected Police and
45 Crime Commissioners, for example, have recently been introduced for every police
46 force in England and Wales with the intention of improving the accountability of
47
48
49
50
51
52
53
54
55
56
57
58
59
60

1
2
3 police forces to the communities they serve. Neighbourhood Watch and other forms
4
5 of community policing, for example, reflect principles of 'active citizenship' and the
6
7 duties of citizens to involve themselves in policing (Fyfe, 1995a). While the police
8
9 use surveillance, they are also subject to it to a greater extent than many other
10
11 agencies (Mawby, 2002). The notion that policing is driven by citizenship is
12
13 normative and, as many studies have shown, class and spatial differences impact on
14
15 this ideal (Herbert, 2006). Nevertheless, the principle is an important one that
16
17 distinguishes policing from the security paradigm.
18
19

20 21 22 *Policing and Security: A Relational Approach* 23

24
25 In the sections above, we have argued that policing and security constitute
26
27 two subtly different but important sets of practices. We have not associated particular
28
29 agencies with particular practices as, increasingly, private, voluntary and state
30
31 agencies have all performed various forms of policing and security. So, rather than a
32
33 focus on particular agencies, we argue that geographers should instead focus on
34
35 how particular practices are used create and control different types of spaces. To do
36
37 this, we advocate a relational approach.
38
39
40

41
42 Relational geographies recognise how networks and flows of ideas, people
43
44 and technologies have challenged 'an older topography in which territoriality was
45
46 dominant' (Amin 2004, p. 6). Rather than being 'fixed', space is reproduced through
47
48 consensual and contested processes, as Murdoch (2006, p.20) suggests 'while
49
50 multiple sets of relations exist, there is likely to be some competition between these
51
52 relations over the composition of particular spaces and places'. Applied to the
53
54 geographies of crime, relational approaches allow place, territory, policing and
55
56
57
58
59
60

1
2
3 security to be considered relatively to and fluidly with each other. We propose three
4
5 ways that this should be taken forward.
6
7

8
9 First, there is a need to examine how different policing and security practices
10 shape and define urban spaces. For example, how do practices of policing and
11 security define space and shape social outcomes within them? For example, if
12 practices of security are producing exclusive enclaves in urban areas, how are
13 spaces outside these policed or secured? What are the consequences for people
14 living in or moving through differently secured/policed areas?
15
16
17
18
19
20
21
22

23 Second, it should be recognised that although the practices of policing and
24 security appear to manifest themselves in particular places or territories, they are
25 themselves products of much wider social and political networks. The spaces of
26 security and policing are more than spatial containers but, instead, are the
27 consequence of on-going governance activities and control mechanisms (Elden
28 2010). The securing of a territory relies on networks of actors that extend well
29 beyond the physical space of that territory and deploy various technologies and
30 databases to secure it (Adey 2009; Paasche 2013a). As Paasche (2013b) and Stuart
31 (2013) demonstrate, agencies not normally associated with policing, such as social
32 workers or charities, have been enrolled into networks that police homeless people
33 and may contribute to their exclusion from some urban spaces.
34
35
36
37
38
39
40
41
42
43
44
45
46
47

48 Finally, policing and security represent forms of bio-politics (Foucault 2007)
49 that aim to reconfigure the composition of a population. This includes the control of
50 the population to ensure that it behaves according to formal and informal rules of the
51 particular territory. Although legislation constitutes and delineates territories or
52 places as 'different' from surrounding urban space, the practices within these places
53
54
55
56
57
58
59
60

1
2
3 enact these ideas and allow them to become manifest in these spaces (Paasche,
4 2012). The practices of security and policing demonstrate that territories are
5 dependent on law and techniques used to enforce it; it is political *process* in which
6 space is 'owned, distributed, mapped, calculated, bordered and controlled' (Elden
7 2010: 810). The legal space and the property rights of the mall, gated community or
8 Business Improvement District might act as a demarcation and reference point for
9 security activities but it is security's bio-political governing activities that create the
10 territory and its boundaries. Policing and security are thus the spatial outcomes of a
11 particular social order (Herbert and Brown 2006).
12
13
14
15
16
17
18
19
20
21
22
23

24 In the final section, we return to Union Street to consider how its space and
25 spaces are shaped by different forms of policing and security.
26
27
28

29 *Return to Union Street*

30
31
32

33 The night time economy of Union Street is controlled by a number of state,
34 private and voluntary agencies who use space in particular ways. Certainly, territorial
35 forms of security are important. The most obvious example are door staff or
36 'bouncers' who are charged with maintaining order in the private spaces of night-
37 clubs or pubs. Their modus-operandi is to allow or prevent entry to premises
38 (Monaghan 2002). This may be on the grounds that a person or persons may cause
39 trouble (perhaps because they have drunk too much) or simply that they do not meet
40 the dress codes or image of the bar. Their work illustrates the principles of security,
41 in that barriers to the space or territory of premises are used to filter out potential
42 threats to the social order inside it. If this order is disrupted by people inside the
43 club, they are simply ejected into the street where the responsibility of the bouncers
44
45
46
47
48
49
50
51
52
53
54
55
56
57
58
59
60

1
2
3 ends. They may, as the example shows above, be tracked by CCTV and, if
4
5 necessary, be subject to police action.
6
7

8
9 In the public spaces of the NTE, the police are the dominant agency. As
10
11 Herbert (1996, 1997) demonstrates, police follow a normative order that structures
12
13 their response to particular situations in particular spaces. Although ostensibly
14
15 concerned with maintaining law and order, this kind of policing reflects a moral order
16
17 that accepts the consumption of alcohol to excess as long as the law is not broken.
18
19 As well as formal practices of policing and security, those on a night out are self-
20
21 policed through informal codes of behaviour, gestures and actions that may be
22
23 variously seen as aggressive, welcoming and ambiguous (Amin 2012, Jayne et al.,
24
25 2010, Thrift 2005) and, as such, can include, exclude or modify behaviour that may
26
27 clash with formal ideas of policing.
28
29
30
31

32 Drawing on specific legislation and licensing laws (Hadfield 2006), the whole
33
34 territory of the NTE can be used as a territory to exclude those viewed as trouble
35
36 makers. For example, those who may have been ejected from a night club may be
37
38 issued with a Penalty Notice Disorder (PND) by police officers that requires them to
39
40 leave the NTE area on pain of being arrested. The aim is to exclude in order to
41
42 prevent crime. Persistent offenders can be banished via a court-issued 'Drinking
43
44 Banning Order', banning them from licensed premises for two years. Intelligence
45
46 gathered from outside the NTE may also be used to target known or potential
47
48 offenders.
49
50
51
52

53 Yet some forms of behaviour, such as rowdy groups, are tolerated in the
54
55 spaces of the night-time economy that would not be tolerated elsewhere (say a
56
57 residential area) as they contribute to the generation of capital through the night-time
58
59
60

1
2
3 economy. One CCTV operator commented that a group of twenty rowdy young men
4 outside a pub 'are fine' and unlikely to cause trouble. Often, the police are reluctant
5 to intervene unless a crime has been committed (Jayne et al. 2010). Yet other types
6 of behaviour, such as begging, are prosecuted as these activities are deemed to be
7 detrimental to the image projected by the NTE. This underlines that policing is
8 concerned with maintaining a hegemonic code of behaviour. More recently, Christian
9 Street Pastors have started to provide voluntary care for people on a night out that
10 they consider are in need of help but do not warrant attention from the emergency
11 services (e.g. minor first aid and the distribution of suitable footwear) (Middleton &
12 Yarwood 2014). This perhaps represents policing in its broadest sense as Street-
13 Pastors attempt not only to provide practical help but to change behaviour and the
14 moral codes of revellers.
15

31 *Conclusion*

32
33
34 This paper has argued that there subtle but significant differences between
35 policing and security. Although Table 1 suggested a binary, we acknowledge a
36 blurring between the two, especially as increasingly many agencies practice both
37 security and policing. Yet, it is still important to distinguish between the two as there
38 they have significant consequences for urban space (and beyond). We therefore
39 contest that policing and security might be considered as a series of relational
40 'encounters' that shape space and social relations in it. Union Street provides one
41 example but more detailed work is needed on other places and territories.

51

52
53 We also posit that thinking in this way has important applied value. In
54 common with other commentators (Herbert & Brown 2006, Young 1999), we share a
55 concern that policing and security has become too focused on exclusionary
56
57

2
3 practices. It is important to wrench practices of policing and security away from the
4
5 notions tightly bounded spatial areas, be they the premises of a shopping mall or the
6
7 bounded community of a residential district. Thinking in more relational ways will
8
9 help to connect different places and people, rather than simply attempting to exclude
10
11 those who do not fit. The challenge for geographers is not only to rethink the
12
13 spatialities of policing and security but to promote research agendas that will
14
15 encourage practitioners to do the same.
